

Ivan Lazarev Vitalievich (22) graduated with a Specialist degree in Bioengineering and Bioinformatics from Sechenov University and is currently a PhD student at the Moscow Institute of Physics and Technology (MIPT). He spent one year at the Laboratory of Nucleic Acids Chemistry, Belozersky Research Institute of Physical and Chemical Biology, where he developed a two-fluorophore plasmid system.

Since 2023, he has been working at the Shemyakin–Ovchinnikov Institute of Bioorganic Chemistry (IBCh RAS). His research employs molecular dynamics simulations, free energy calculations, and the “dynamic molecular portrait” approach to study the role of residues in TRPV channel gating. His broader interests include theoretical biology.
