

Anna Malykhina is a researcher at the Laboratory of Membrane and Ion Channel Modeling, Institute of Cytology, Russian Academy of Sciences, St. Petersburg, Russia. She received her PhD in 2025 with a degree in molecular biology. Her interests include molecular dynamics, quantum chemistry, and biophysics. In the laboratory, she participates in the study of the possibilities of targeting drugs on biological membranes, which, ultimately, should contribute to the development of innovative antibacterial, antifungal, antiviral and antitumor drugs.
