

Vladimir Polshakov is Head of the Laboratory of Magnetic Tomography and Spectroscopy, Chemical Department, M.V. Lomonosov Moscow State University. He holds a PhD in Organic Chemistry and a DSc in Biochemistry, with extensive academic and research experience in structural biochemistry, biomolecular NMR spectroscopy, protein structure and dynamics, and molecular pharmacology.

Dr. Polshakov has authored nearly 200 scientific publications and has served as Principal Investigator on numerous national and international research projects, including grants from the Russian Science Foundation, Wellcome Trust, and Howard Hughes Medical Institute. He has contributed editorially to international journals in structural biology and molecular pharmacology. His current research focuses on protein–ligand interactions, molecular mechanisms of drug action, and the development of NMR-based methods for studying biomolecular systems.
